VERIFICATION

1. Compute SHA-256 of the document you wish to verify.
2. Match it against the corresponding hash listed above.
3. Confirm the signatures at whig.app/verify using WHIG's published public key.

Each hash was signed with AWS KMS (ECC_NIST_P256, ECDSA). Paste the sealed record JSON included with your package at whig.app/verify to confirm every signature against WHIG's public key, independently of WHIG. These checks cover the original records identified here, not later edits. They do not verify ownership, filming date or valuation accuracy, or guarantee an insurance claim outcome.

SAMPLE ONLY | AI-created photos, fictional values and integrity data. Not a verified record.
